06. Project Testing

Testing Objective

The testing phase ensures that the developed solution works as expected, meets functional requirements, validates end-to-end automation, confirms data accuracy, and checks basic security and access-control practices.

Data Validation Checks

Mandatory fields are captured correctly.

Auto-number is generated without duplication.

Category and Subcategory values are stored accurately.

Reference fields resolve correctly to user and group tables.

Test Scenario 1 — Wi-Fi Issue

Enter one Caller Name.

Enter Short Description: WiFi not working in library.

Save the form and reload it.

Verify Category → Network.

Verify Subcategory → WiFi.

Verify that an email is sent to the caller's email ID.

Test Scenario 2 — Projector Issue

Enter one Caller Name.

Enter Short Description: Projector not turning on.

Save the form and reload it.

Verify Category → Hardware.

Verify Subcategory → Projector.

Verify that an email is sent to the caller's email ID.

Email Verification

Open All menus → Emails → System logs → Emails, search using the given subject name, open the record, and use Preview mail to inspect the notification.
