07. Project Documentation

Project Overview

Auto Ticket Classification using Flow Designer is an end-to-end ServiceNow automation solution for a school IT helpdesk.

Documentation Structure

Requirement analysis and business requirements.

Custom table and field configuration.

Category and Subcategory dependency configuration.

Flow Designer trigger and classification logic.

Email notification configuration.

Testing and validation procedures.

Deployment through Update Set export.

Deployment Documentation

Go to All menus → Local Update Sets.

Open the Project Update Set.

Change State from In progress to Complete.

Save the form.

Use the Related links → Export to XML option.

The Update Set data is downloaded in XML format and can be shared through email or other channels.

Maintenance and Scalability

The documented solution uses Flow Designer and is intended to be easy to maintain and scalable. The project notes that it can be extended in the future with features such as assignment automation, SLA tracking, or predictive intelligence.

Conclusion

The project provides a structured no-code approach to automatic ticket classification, dependent field handling, and caller notification for a school IT helpdesk.
