08. Project Demonstration

Demonstration Objective

Demonstrate the complete end-to-end workflow from ticket creation through automatic classification and caller notification.

Demo Flow

Open the Incident WorkFlow ticket form.

Enter a Caller Name.

Enter a Short Description containing a supported issue keyword.

Submit/save the ticket.

Allow the Record Created Flow to execute.

Reload the form and inspect the automatically populated Category and Subcategory.

Verify that the email notification is sent to the caller.

Demo 1 — Wi-Fi Classification

Short Description: WiFi not working in library.

Expected Category: Network.

Expected Subcategory: WiFi.

Expected result: Email notification sent to the caller.

Demo 2 — Projector Classification

Short Description: Projector not turning on.

Expected Category: Hardware.

Expected Subcategory: Projector.

Expected result: Email notification sent to the caller.

Additional Classification Logic to Demonstrate

Password or Login → Access / Forgot Password.

Slow or Hanging → Performance / Slow Computer.

Email Demonstration

Open the Emails list under System logs, search for the configured subject, open the email record, and use Preview mail to demonstrate the generated notification.

Expected Overall Outcome

The demonstration should show that a student can create a ticket without manually selecting Category or Subcategory, while the Flow Designer automation performs classification and sends a confirmation email.
